

South Bay by Pantone.

a CHART Scarborough trail.

This trail encourages you to look at Scarborough's changing landscape and seasonal moods using the Pantone Colour Matching System, twinning colour references to views.

The Pantone system is used worldwide to ensure colour accuracy by printers and designers. No design studio is complete without a set of 'Pantone books' which look like a collection of the paint colour sample cards you can collect in DIY stores. Each colour has a numerical code identifying it.

If you don't have such a book to hand, check out the pantone website (www.pantone.co.uk) or put 'pantone' in a search engine and look at the images it brings up.

Free map available at venues across Scarborough.

Start at:

The Spa Bridge [Grid ref G11] looking out to sea on a bright morning with a mild sea fret, the tide receding.

Beach: 7502C
Thin layer of sea on the sand: 434C
Sea merging into mist: Pantone 7541C

Head across the bridge towards St. Nicholas Cliff. Turn left as you leave the bridge and down the flight of steps onto Museum Terrace. Stop to look at the view outside:

Electric Angel Gallery [Grid ref G11] on a sunny summer's day.

Bridge ironwork in moderate sunshine: 318C
Bridge stone pillars in sun: 727C, 7528C & 7501C
Elm leaves top side: 364C
Elm leaves underside: 7492C

Head down the terrace, under the bridge and left along the foreshore to:

The Futurist Theatre [Grid ref I12] on a cloudy late afternoon in spring.

Futurist 1970's frontage: 124C
Obscured original soapstone frontage: Cool Gray 1C
Repositionable display lettering: 1788C

Continue along the foreshore and call in at:

An amusement arcade of your choice [Grid ref I13-J14] on a surprisingly warm autumn afternoon.

Two pence coins on a 'waterfall': 876C
Mint choc chip ice cream: 337C & 7519C
Stick of rock: 191C

Cross over the road and finish the trail at:

The Harbour [Grid ref J15] mid winter, mid morning with light drizzle.

New fishing net spread on the ground: 122C & 546C
Smear of rust on a trawler: 7524C
Diesel floating on the water surface: 5473C & 512C
Stainless steel edge of sculptural seating: 877C
